

PRINCE2 AGILE®

The strength of PRINCE2 lies in the areas of project direction and project management. Agile has a very strong focus on product delivery. Therefore, when PRINCE2 and agile are combined, all three areas are addressed.

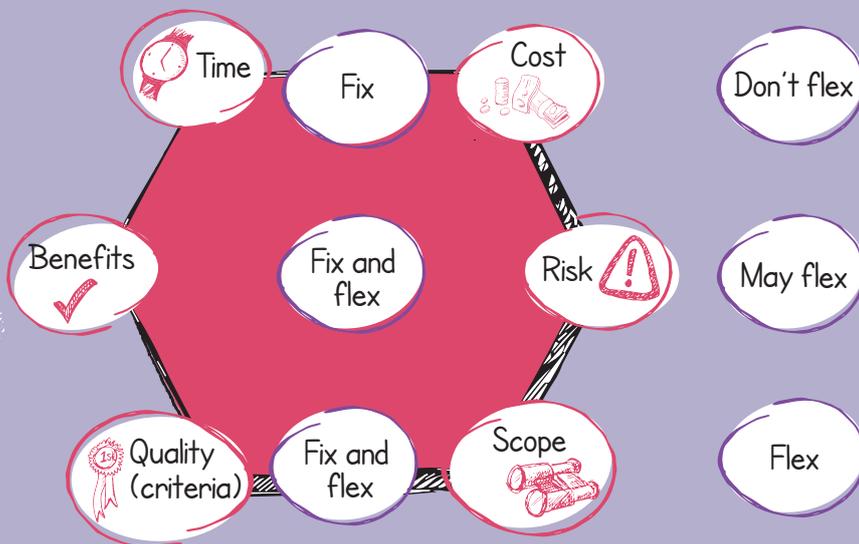

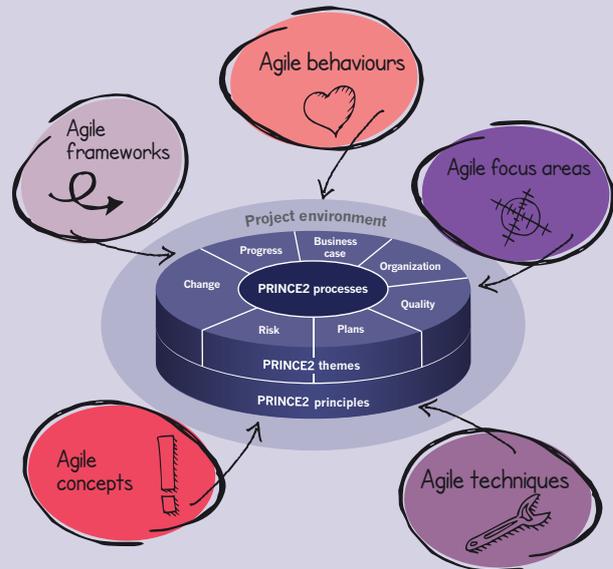

It is essential to see this combination as a blend and a mixture as opposed to PRINCE2 and agile working in parallel. Those directing and managing a project in an agile context need to adopt agile disciplines and behaviours.

Equally, those using agile to deliver need to integrate seamlessly with the PRINCE2 ethos of staying in control by empowering people and ensuring that the project remains viable.

PRINCE2 comprises an integrated set of principles, themes and processes that are tailored to the specific needs of a project.

Agile encapsulates a wide collection of frameworks, and PRINCE2 Agile incorporates and references several of them.

A few of these methods and approaches receive particular attention in PRINCE2 Agile because they are seen as very popular or good practice. They are Scrum, Kanban and Lean Startup.

Of the many ideas, concepts and techniques that exist within PRINCE2 Agile, one of the most important is that it focuses on flexing what is being delivered, as opposed to focusing on flexing time and cost or flexing time and resources.

PRINCE2 Agile does define what to emphasize by giving guidance on the use of tolerance levels (i.e. permissible deviations from what is planned) for the six aspects in terms of which should be fixed and which ones should vary (or flex).
